**Smallest 5G/4G Testing
XCAL-Mobile**

An aerial view of a city skyline, likely New York City, featuring prominent skyscrapers like the Freedom Tower. The image is overlaid with a dark, semi-transparent grid and faint, glowing digital lines and data points, suggesting a technological or network theme.

Mobile network test equipment uses smartphones to gather diagnostic logs and optimize network performance, simplifying the testing of multiple technologies and devices. However, not every engineer requires complex hardware to get the job done.

For those looking for a simple, convenient testing solution without extra hardware, XCAL-Mobile is the perfect fit

XCAL-Mobile supports real-time analysis of QoS and QoE, helping optimize RAN performance. Compatible with most Android smartphones, it enables effortless RF data capture in real-time.

XCAL-Mobile supports diverse network technologies and call types, including 5G NR KPIs. Customize automated call scenarios to suit any test purpose

To use XCAL-Mobile, a custom kernel is required on your smartphone. The Accuver team is here to help with installation, ensuring a seamless setup.
