Navigation for Drive Test XCAL-Navi

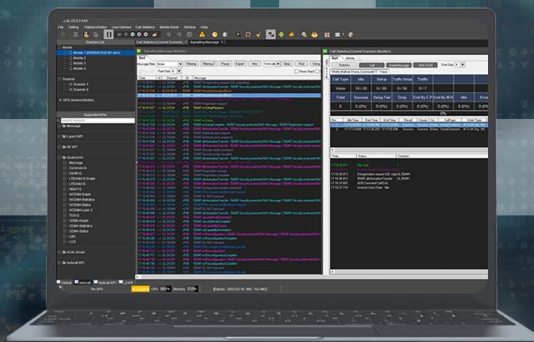

Drive testing often suffers from inconsistent routes and unclear instructions. XCAL-Navi eliminates this by guiding testers along predefined paths using navigation.

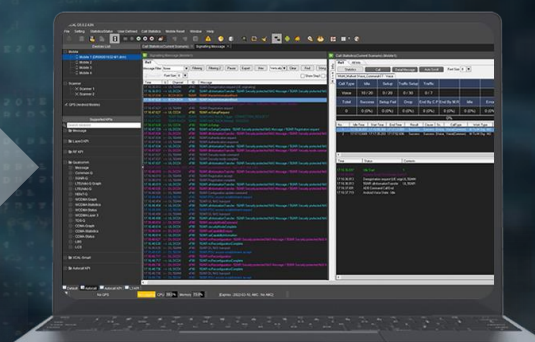

XCAL-Manager

XCAL

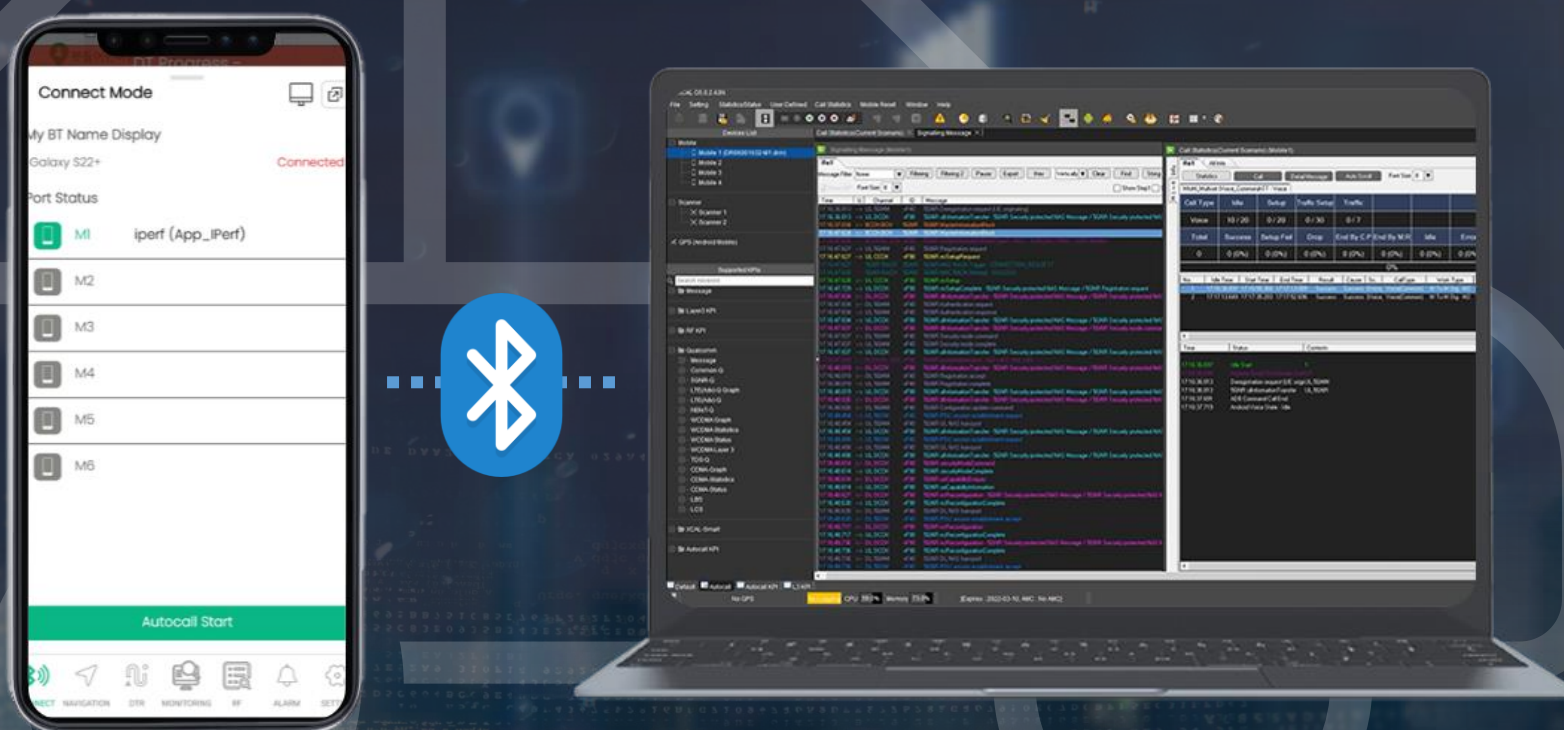

XCAL

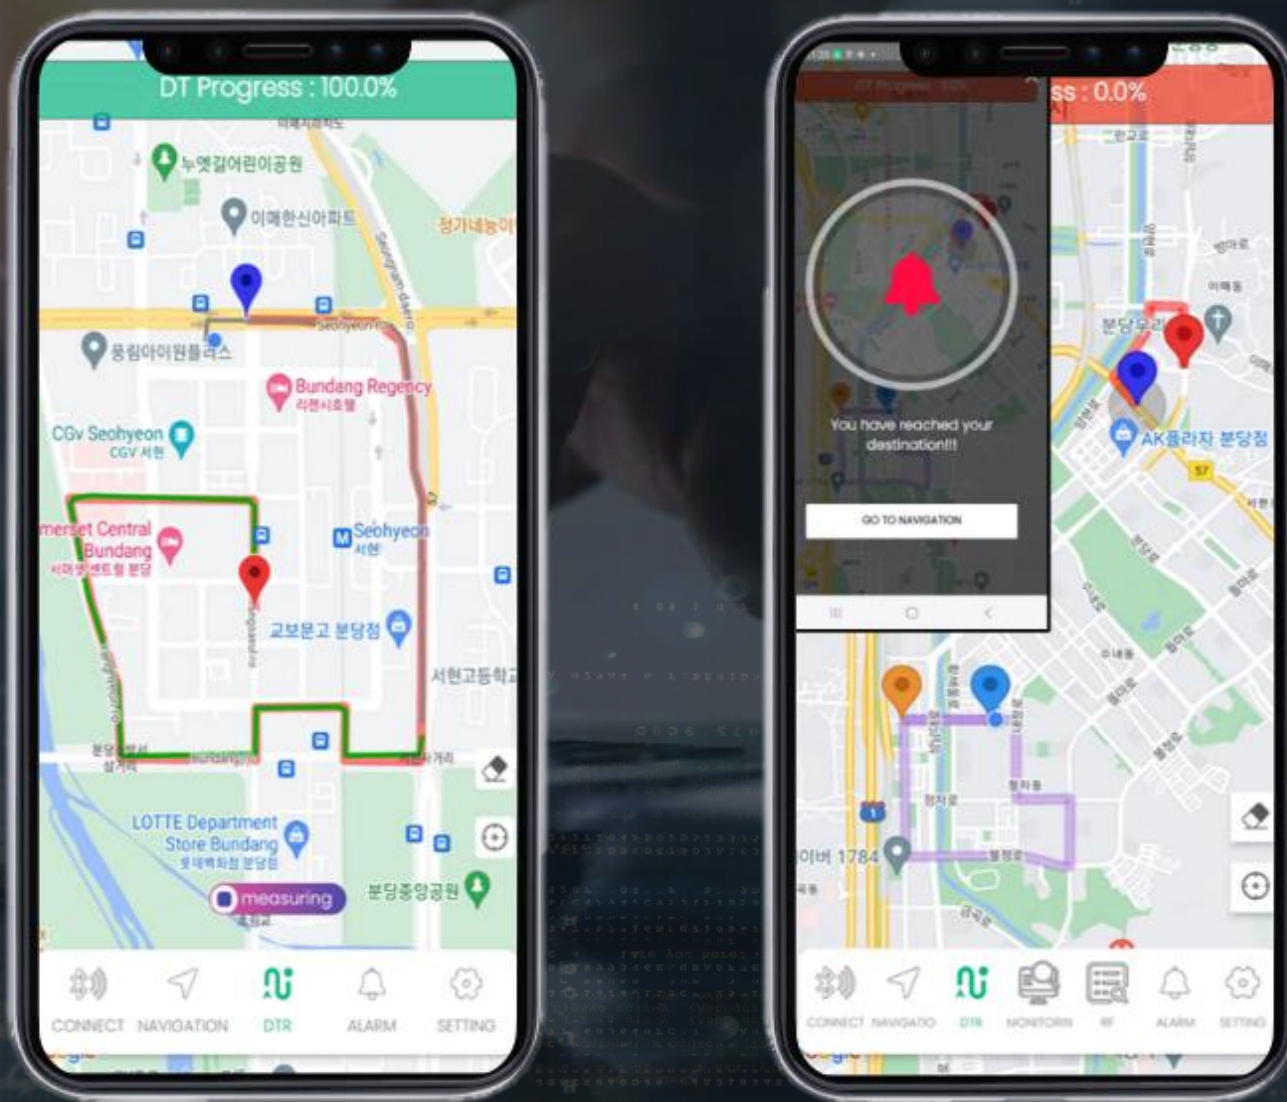

XCAL

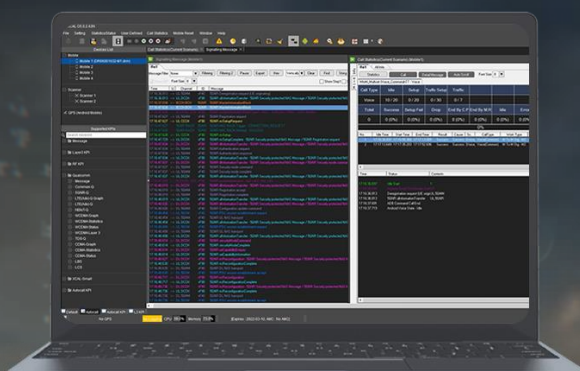

XCAL-Manager remotely defines test areas as grids or mapped routes and pushes them to XCAL along with scenarios and pass/fail criteria.

XCAL-Navi, fully integrated with XCAL, syncs via Bluetooth to deliver Drive Test Routes, scenarios, and site information to the tester. It automates execution with precision—ensuring consistent, repeatable measurements with minimal effort.

XCAL-Navi shows test progress on the map in real time. Alarms flag issues instantly, and in-app controls enable quick resets and adjustments—all from one mobile interface.

XCAL-Navi supports the full range of Accuver's XCAL series—such as XCAL, XCAL-Mate, and XCAL-Pu6—adapting to various test setups. Its versatility ensures seamless navigation across platforms, meeting FCC drive test mandates.
