

Accuver

**Unified cloud platform
for testing, monitoring & AI insights**

Accuver Cloud

THE BOTTLENECK

Network testing often involves field teams, lab equipment, multiple devices and large volumes of data. Managing all of these activities separately can slow down the path from measurement to insight.

How can distributed teams coordinate testing activities, collect data consistently and keep every task connected in one workflow?

Accuver Cloud

Over-The-Air
Management

Deep Device Control

Fleet Readiness

Accuver Cloud provides a centralized workspace for network testing and measurement. Teams can schedule, monitor and control XCAL series assets while viewing device status, routes, scenarios and work orders in one place.

Campaigns

Work Orders

Call Scheduler

It connects test plans, work orders, execution, data collection and analysis as one continuous operating model. Measurement logs are automatically uploaded, indexed and organized in a central repository for easy search and reuse.

As a cloud-based solution, Accuver Cloud can expand with users and campaigns without requiring local installations or dedicated hardware for every new requirement.

Slashed OpEx

Accelerated
Time-to-Insight

Infinite Scalability

AI-powered reporting automatically correlates measurements, alarms, events and RF indicators to accelerate troubleshooting.
